

## OER – Hands on Practice

- (1) **Creating the OER**: Use **WikiEducator** to create the personal page. First to create the userid and log in. Explain the editing features, uploading image and creation of tables.
- (2) Use platform "**OERCommons**" <https://www.oercommons.org/> . Here too the participants need to create an userid first and then create a course. it can be a simple course of two three pages initially. integrate multimedia into it.
- (3) Create **Podcast** using **audacity**.
- (4) Create a **Video** using either the cell phone (which is easy during the workshop: just they can record a two minute clip of the interview of their fellow colleague on some aspect of education or anything else) or **screen cast** or from images using **Windows Movie Maker**. Even Power point can be converted into a movie.
- (5) Create a **blog on blogspot**. so that the participants can use it for uploading their material.
- (6) Assigning a **CC License** to their work. Tell them all the licenses and which one they would like to put to their work.
- (7) Sharing the work on **WikiEducator** and Upload on their personal blog.
- (8) Publicize the work using **twitter or facebook**.
